

CABRIOTM FOLDING WALLS

Blustering winds and inclement weather patterns can be incompatible with open air patios, shutting down beautiful outdoor spaces for months at a time. For restaurants, this can mean less patrons during bouts of disagreeable weather. Our Folding Walls can be used in conjunction with fixed or retractable roofs, or awnings and canopies to transform nearly any outdoor space into a year-round entertainment center. Instead of settling for a seasonal patio, less time outside and less revenue, transform your outdoor space into a reliable, flexible patio with a Folding Wall System.

Both of our folding wall systems have a Storm Frame, offering greater protection from inclement weather. The Aluminum Folding Wall System is hung on a mortised continuous geared hinge and offers a large door panel size. The Wood Frame Aluminum Clad Folding Wall System is built of high-grade Western Pine and treated with a water-repellent preservative.

If you're looking for an easy moving, efficient wall system to enclose your patio, our Folding Walls are an excellent choice!

FEATURES:

- infinite variety of powder coating colors
- endless options of glass types
- excellent product & hardware specifications
- thermal and non-thermal systems available
- hinge ratings up to 1,000 lbs.

BENEFITS:

- complements historic buildings
- multiple glass tints for softening sunlight
